Blockchain in Banking

Blockchain is a disruptive technology that will fundamentally change banking. Blockchain is a technology that uses distributed databases, math and cryptography to record transactions.

Get certified! Stay ahead of the competition!

This one-day workshop is designed to provide the participants with an introduction to concept of Blockchain and the decentralized ledger technology. Participants will be introduced to the theory, principles and uses of Blockchain technology in banking and how Blockchain can be leveraged by various applications across banking verticals.

When you attend this workshop, you will get an understanding of :

- Concept of blockchain and distributed ledger technology
- Use of cryptography and hashing
- What is mining and how is it done
- Types of consensus protocols
- Benefits of using blockchain technology
- How blockchain can be used in banking
